Tornasole Lamp

Breathgeneration - Collective air quality observatory
for Atelier by Casaralto

Tornasole is a lamp that elegantly combines the art of freehand blown glass, a hallmark of Casaralto, with sophisticated technology developed and refined over two years. The device integrated into the lamp monitors the air quality in your environment, changing color shades based on the measured air values.,

Every minute, the lamp recalculates the air component data and displays a numerical value corresponding to the color, aligned with the internationally recognized AQI scale.

This innovation is made possible by advanced integrated laser and bio-sensors of the highest standard.

Tornasole measures PM1, PM2.5 PM 10, VOC, Pressure, Temperature, NO2, CO following the Air Quality Index (AQI)

PM2.5: very dangerous suspended particulate matter

PM10: particulate matter

CO: carbon dioxide

NO2: nitrogen dioxide

VOC: volatile chemical organic compounds

Tornasole operates with a touch system

- At the **first touch**, it lights up and, after a few minutes, settles on a color reflecting the measured air quality values.
- At the **second touch**, it stops monitoring the air and emits a steady light at 4000K.
- At the **third touch**, it switches off.

Recommendations

For optimal performance and reliable data, the lamp should not be exposed directly to cigarette smoke, solvents, or other pollutants in large quantities.

ARIA app

To better understand the correlation between your lamp's color and the numerical data according to the AQI scale, you can easily connect to the Aria Light App via Bluetooth pairing using the password 293721.

Discover more

The QR code directs you to the Tornasole page on the Casarialto website, where you can find more information and also purchase the lamp.
